- Auxiliary mini jack input

OBJECTIVE

iQuake® - The new line of Earthquake media player/audio system dramatically enhances the quality of your digital music from an iPod® or other portable media player. The IQ52 systems replenish subtleties that get lost during compression from the original media to portable devices.

With sound quality that fills the room to its acoustic capacity, the IQ52 system with 2.1 capability are supported by superior quality carbon fiber mid-range units, smooth and non-compromising 20mm silk dome NEO tweeters and a high power 200-Watt built-in amplifier.

The cabinets are built strong and carefully coated with a luxurious high gloss lacquer finish that is as flawless as the music flowing from the speakers. Additionally, their neutral color of the iQuake® system naturally blends into any environment. iPod® ready docks and cables are included for stereo/home entertainment system connections while the docking station enables the system to play, recharge and sync your iPod® from one convenient location.
