- Patented designs exclusive to Earthquake
- Platform mounting for expanded applications
- Flat wire aluminum voice coil
- Thermal protection
- Rugged cast aluminum heat sink
- XJ300R and XJ600R optimized amplifier are available

### OBJECTIVE

The Quake Series of Tactile Transducers is an awe-inspiring sub harmonics unit designed for special effects enhancement. You can now add super sensitive low frequency effects without using costly hydraulics or a bulky and expensive subwoofer. The Quake Tactile Transducers virtually eliminate low-end resonance into adjoining areas. Designed for superior music quality, the Quake Tactile Transducers answers to the need for both accurate low-frequency response and maximum tactile effect in your home or car.

One (1) Q10B bass shaker can easily replace three, four or even five typical shakers. Moving two or three theater seats or even a sizeable platform is an easy task for the Q10B. And don't be fooled by the size of the MQB-1 as it can shake your seat and give you that tactile effect you will need to your audio experience.

With only one (1) moving part and a cast aluminum heat-sink for excellent heat dissipation and protection from damage, the Quake Series of Tactile Transducers are maintenance free and practically indestructible.

### SPECIFICATIONS

	Q10B	MQB-1
Frequency Response	5 - 40Hz	15 - 50Hz
Power Handling	Up to 1000 Watts	Up to 300 Watts
Impedance	8-Ohm
